

deny the very history of marijuana itself. In light of the information given to us by Mr. Eliade, does it make sense to become a drug addict as part of a religious experience? We have shown how this very same idea has been obscured in the New Testament.

The problem with marijuana, and with psychotropes, is that they are in the hands of many people who do not have a knowledge of their therapeutic use. Just as pharmacists are considered qualified to dispense drugs (due to their education and training), only herbalists or herbologists are qualified to use and dispense psychotropics. In America, it has been proven that Dr. John E. Moore is the leading authority on the subject of herbology as well as apiarian nutrition.
